

READY TO BUILD?

Here's our simple two-step process.

STEP 1

PennGrade 1® Engine Assembly Lubricant is recommended as a pre-lube for building new engines and their components including cam lobes, lifters, wrist pins, rod bearings, main bearings, etc.

(PART #71055)

STEP 2

Once assembly is completed, PennGrade 1 Break-in Oil SAE 30 is the perfect choice to provide wear control for critical engine parts while allowing the engine components to seat, resulting in maximum engine performance and life.

(PART #71206)

It's that simple.
